European IVD Services – From Development to Market

European IVD Services – From Development to Market

Are you looking for support to bring your IVD product idea to market?

With our strong partner network we support you in Robotics & Lab Automation, IVD product development, IVD production, FDA/IVDR approval study design and execution.

IVD Product Development

Hahn-Schickard is your R&D service provider for intelligent products. Together with our partners we support

you in IVD product development – from initial design to serial production.

We have strong expertise in laboratory automation, assay development, centrifugal microfluidics and liquid handling solutions. With its three-line concept and ISO 13485 certification, Hahn-Schickard is able to provide microfluidic cartridges from prototype to CE-IVD products.

Medical Device Manufacturing

RKT GmbH is one of the technology leaders for innovative plastics processing in the medical technology sectors. The company produces for renowned customers from all over the world. RKT supports as a manufacturing partner in design development, tool design and construction up to complete manufacturing solutions, e.g. for diagnostics and microfluidics.

Customers benefit from an efficient value chain, from plastic injection moulding to the finished packaged product - with collaborative robotics and under controlled cleanroom conditions.

Production & Packaging Machinery

Harro Höfliger specializes in the development of customer-oriented process and production solutions for pharmaceutical and medical applications as well as market-oriented consumer products.

In addition to innovative machine platforms and packaging machines, customized turnkey system solutions for product assembly, processing of web materials, as well as dosing and inhalation technology are the company's core expertise.

Clinical & Analytical Performance Studies

Your diagnostics studies in good hands: TRIGA-S is a German contract research organization with own laboratory, specialized on analytical and clinical performance studies / evaluations for in vitro and companion diagnostics (IVD, CDx) according to e.g., IVDR. Our cross-functional teams are GCP/GCLP

qualified and cover BSL2 contract laboratory, study management, biostatistics, monitoring, data management, sample management, clinical trial supply, logistics, and storage. We are ISO 13485 certified.

Instrument Design & Manufacturing

We operate as a strategic engineering partner for the development of complex optical measurement devices and as a manufacturer of compact rapid test readers. Our customers are predominately in the fields of point of care diagnostics, food or environmental analysis with a need for customized measuring instruments for their tests.

Co-location of consulting, development and production department makes us a one-stop solution which guarantees short cycle times from the idea to the finished product.
